

The W.C. pan can be installed as a standard low level configuration with exposed cistern. To achieve this install the W.C. 200mm off the wall. If required the void left could be filled by our laminate spacer box unit see page 170.

Cistern lever should be installed on the right of the cistern for LH installation and on the left for a RH installation. (Left hand illustrated.) There must be visual contrast between the wall and floor finishes. The wall finish must also contrast with the sanitaryware and grab rails. Lever action tap supplied.

The basin must be handed left and right to enable the tap to be fitted nearest to the W.C. Failure to achieve this will render the installation non-compliant. Doors should be fitted with light action privacy bolts with emergency release mechanisms or N&C Phlexicare Radar locks supplied by N&C under the Radar National key scheme.

All doors, alarms, Equality Act compliant handles & associated Ironmongery can all be obtained from N&C.

An emergency assistance alarm must have:

1. Visual and audible indicators confirming the emergency call has been received.
2. A reset control reachable from the W.C. pan or a wheelchair - shower seat.
3. A signal that is distinguishable visually and audibly from the fire alarm.
4. A red alarm cord with two rings, one set between 800mm and 1000mm and the other 100mm above the floor surface.

Blue Low Level Plus

P6830052

1	Pentland Low Level Raised Height Pan
1	Blue Seat only (Advanced)
2	Pentland Reversible Cistern with Screw Down Lid
2	6 litre Cistern Fitting Pack Dual Flush
